RAC 83 AX

The undersigned Far S.r.l., having its office in Quarto Inferiore (BO), Via Giovanni XXIII No. 2, herewith
DECLARES

on its sole responsibility that the riveting machine

Type: RAC 83 AX - Pneumatic tool Application: for rivets diameter. 2.4—4.8 mm (4.8 aluminum only)

which is the object of this declaration complies with the basic safety requirements established in the law decree Leg. D. 17/2010 of Machinery Directive 2006/42/CE acknowledge and subsequent amendments and integrations.

The person who is authorized to create the technical brochure is

Giacomo Generali, c/o Far S.r.l., head office in Quarto Inferiore (BO), via Giovanni XXIII n. 2.

Quarto Inferiore, 23-03-2010

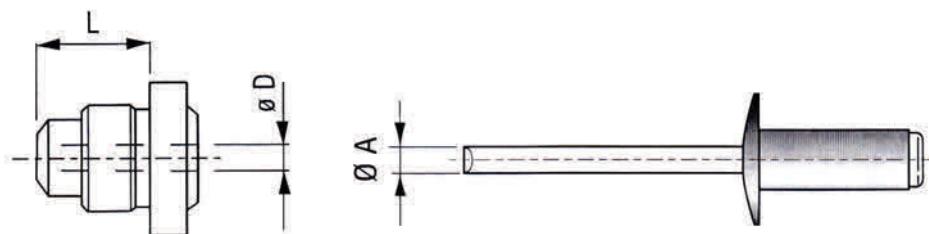

A handwritten signature in black ink, appearing to read "Giacomo Generali".

Far S.r.l. – Giacomo Generali
(Chairman of the Board of Directors)

GENERAL NOTES AND USE

The tool must be used for rivets diam. 2.4 - 4.8mm **only**.

Diameter is 4.8 mm only in aluminum.

Code	L	Ø D	Ø A ÷
717001	8.5	2.25	1.7 ÷ 2.1
717002	10	2.7	2.15 ÷ 2.4
717003	11.2	3.1	2.6 ÷ 2.75

GUARANTEE

FAR riveting tools are covered by a **12-month** warranty. The tool warranty period starts on the date of delivery to the buyer, as specified in the relevant document. The warranty covers the user/buyer provided that the tool is purchased through an authorized dealer and only if it is used for the purposes for which it was conceived. The warranty shall not be valid if the tool is not used or maintained as specified in the instruction and maintenance handbook. In the event of defects or failures, **FAR S.r.l.** shall undertake solely to repair and/or replace the components it judges to be faulty.

SAFETY MEASURES & REQUIREMENTS

CAUTION!!!

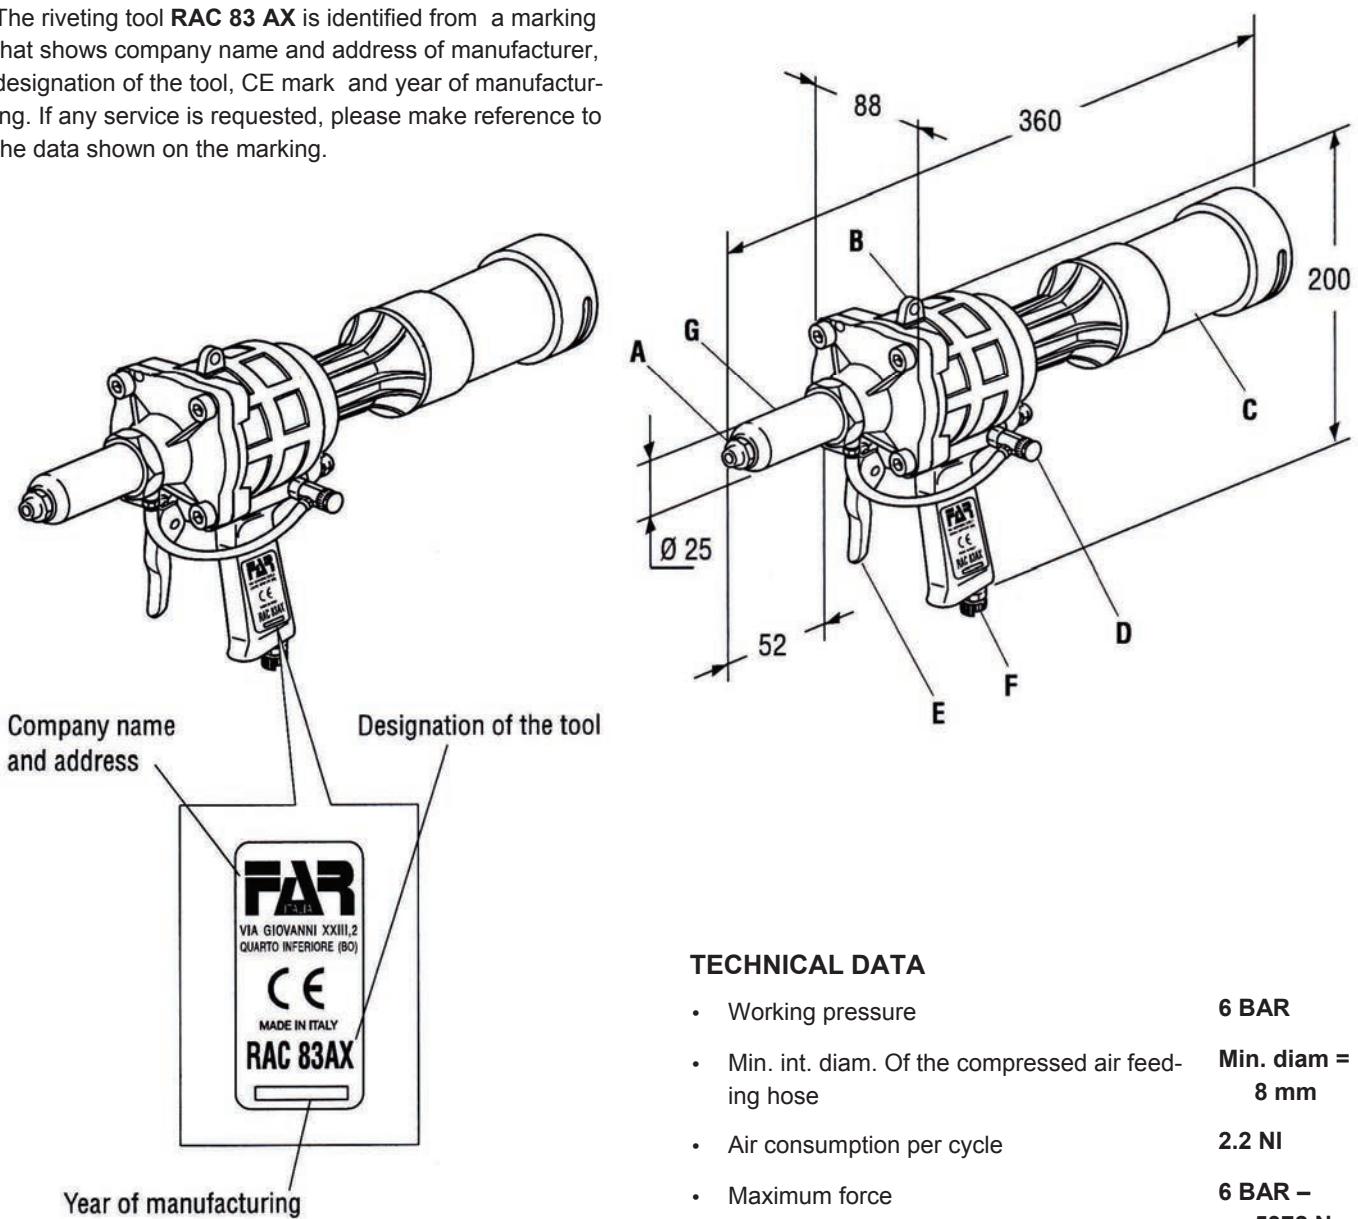

All the operations must be done in conformity with the safety requirements, in order to avoid any consequence for your and other people's security and to allow the best tool work way.

- Read the instructions carefully before using the tool.
- For all maintenance and/o r repairs please contact **FAR s.r.l.** authorized service centers and use only **original spare parts**. **FAR s.r.l.** may not be held liable for damages from defective parts caused by failure to observe what above mentioned (**EEC directive 85/374**).
- The tool must be used only by expert workers.
- A protective visor and gloves must be put on when using the tool.
- Use equipment recommended in the maintenance chapter to do any maintenance and/or regulation of the tool.
- For topping up the oil, we suggest using only fluids in accordance with the features specified in this working book.
- If any drop of oil touches your skin, you must wash with water and alkaline soap.
- The tool can be carried and we suggest putting it into its box after using.

- The tool needs a thorough six-monthly overhaul.
- Repairing and cleaning operations must be done when the tool is not fed.
- If it is possible, we suggest a safety balancer.
- If the A-weighted emission sound pressure level is more than 70 dB (A), you must use some hearing protections (anti-noise headset, etc.).
- The workbench and the work surface must be always clean and tidy. The untidy can cause damages to people.
- Do not allow unauthorized persons to use the working tools.
- Make you sure that the compressed air feeding hoses have the correct size to be used.
- Do not carry the connected tool by pulling the hose. The hole must be far from any heating sources or from cutting parts.
- Keep the tools in good conditions; do not remove either safety parts or silencers.
- After repairing and/or adjusting, make sure you have already removed the adjusting spanners.
- Before disconnecting the compressed air hose from the tool make sure that there is no pressure in the hose.
- These instructions must be carefully followed.

TOOL IDENTIFICATION

The riveting tool **RAC 83 AX** is identified from a marking that shows company name and address of manufacturer, designation of the tool, CE mark and year of manufacturing. If any service is requested, please make reference to the data shown on the marking.

MAIN COMPONENTS

- A) Nozzle
- B) Balancer connection
- C) Nails container
- D) Suction valve
- E) Tensile strength button
- F) Compressed air connection
- G) Head carrying nozzle

TECHNICAL DATA

- | | |
|---|----------------------|
| • Working pressure | 6 BAR |
| • Min. int. diam. Of the compressed air feeding hose | Min. diam = 8 mm |
| • Air consumption per cycle | 2.2 NI |
| • Maximum force | 6 BAR – 5372 N |
| • Weight | 1.74 Kg |
| • Working temperature | -5°/+50° |
| • Root mean square in total acceleration frequency (Ac) to which the arms are subjected | 3.3 m/s ² |
| • A-weighted emission sound pressure level | 86 dBA |
| • Peak C-weighted instantaneous sound pressure | <130 dBC |
| • A-weighted emission sound pressure | 94 dBA |

AIR FEED

The air feed must be free from foreign bodies and humidity in order to protect the tool from premature wear and tear of the components in movement, therefore we suggest to use a lubricator group for compressed air.

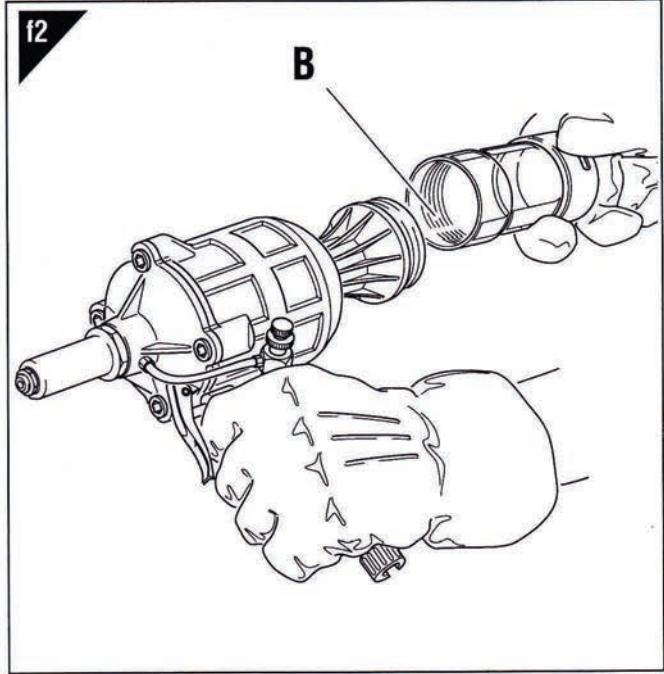

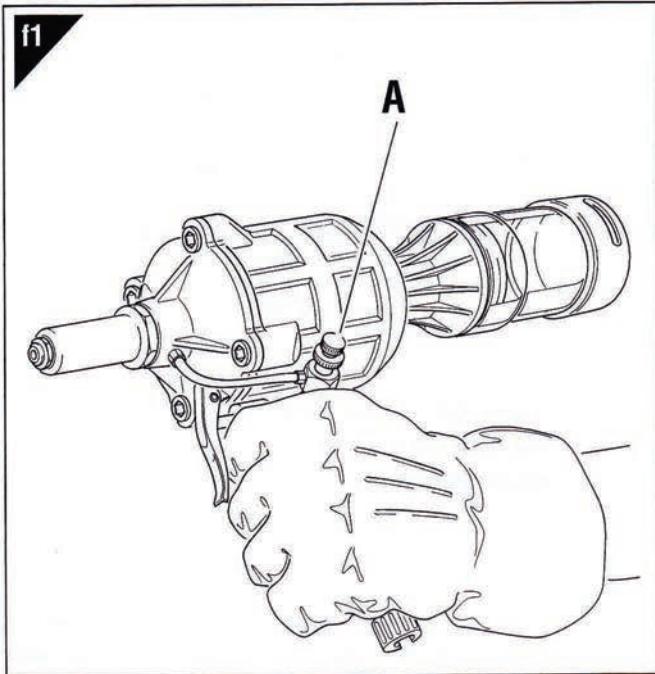

HOW TO USE YOUR RIVETING TOOL (fig. f1-f2)

After the clamping, the sheared nail is piped by the riveting tool and ejected from the back into the special container (**B**). By swinging the valve (**A**) you can adjust the suction power. By the suction nail system, the rivet remains in the nozzle also turning over the head of the riveting tool downwards: this detail increases a lot the usefulness of the riveting tool.

Do not keep the rivet with your fingers!

**WARNING!**

Do not remove the container (**B**) during the riveting operation, as the nail ejection can cause damages to the worker or to persons who are nearby the work surface.

When the container (**C**) is full of nails do not use the riveting tool. Disconnect the tool, unscrew the container (**B**) and empty it.

DO NOT DISPERSE ANY NAIL! Screw the container and start again to work.

MAINTENACE AND CHANGE OF SIZE (fig. f3-f4-f5-f6)

The extended utilization of the riveting tool can cause the slipping of the clamps on the nail due to the deposited impurities.

For this reason, it is necessary to lubricate the clamps after having cleaned them. However, if clamps are worn out and as a consequence their working is jeopardized, replace them.

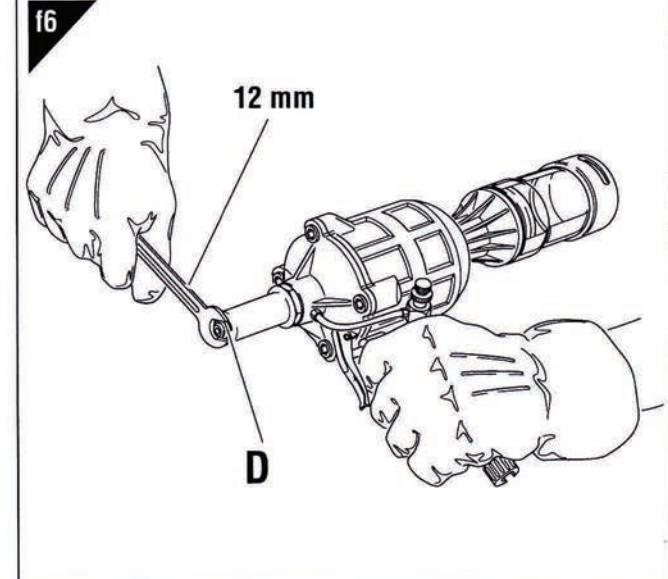

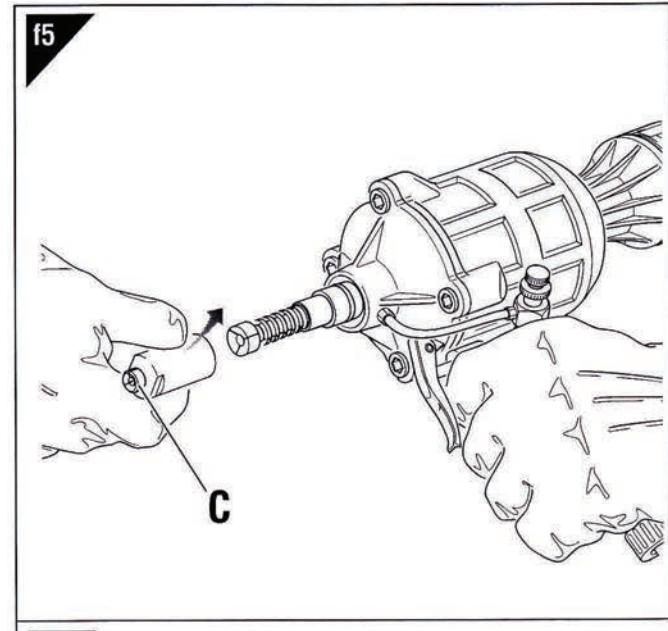

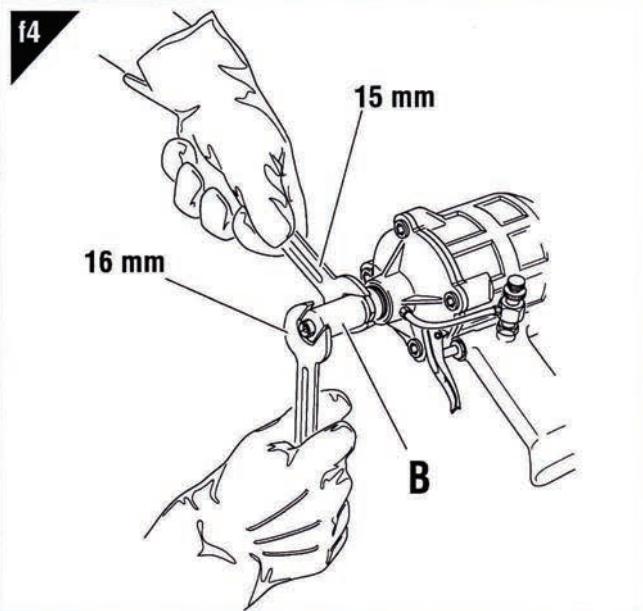

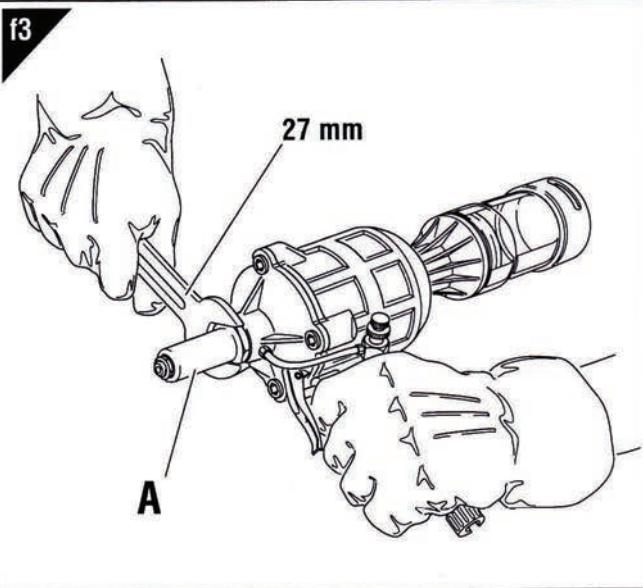

First remove the head which carries the nozzle (A), by means of a standard spanner of 27 mm. Then, by using two spanners of 15 mm and 16 mm, remove the chuck (B) and extract the clamps (C).

When replacing the nozzle (D), we recommend to use a 12-mm standard spanner and fit the removed nozzle in the proper housing located on the bottom of your riveting tool, in order to avoid losing the nozzle.

WARNING!

Disconnect air feed when performing those operations.

DISPOSAL OF THE RIVETING TOOL

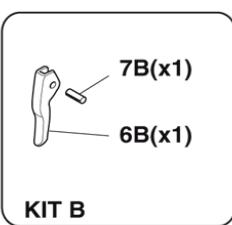

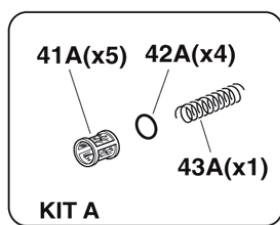

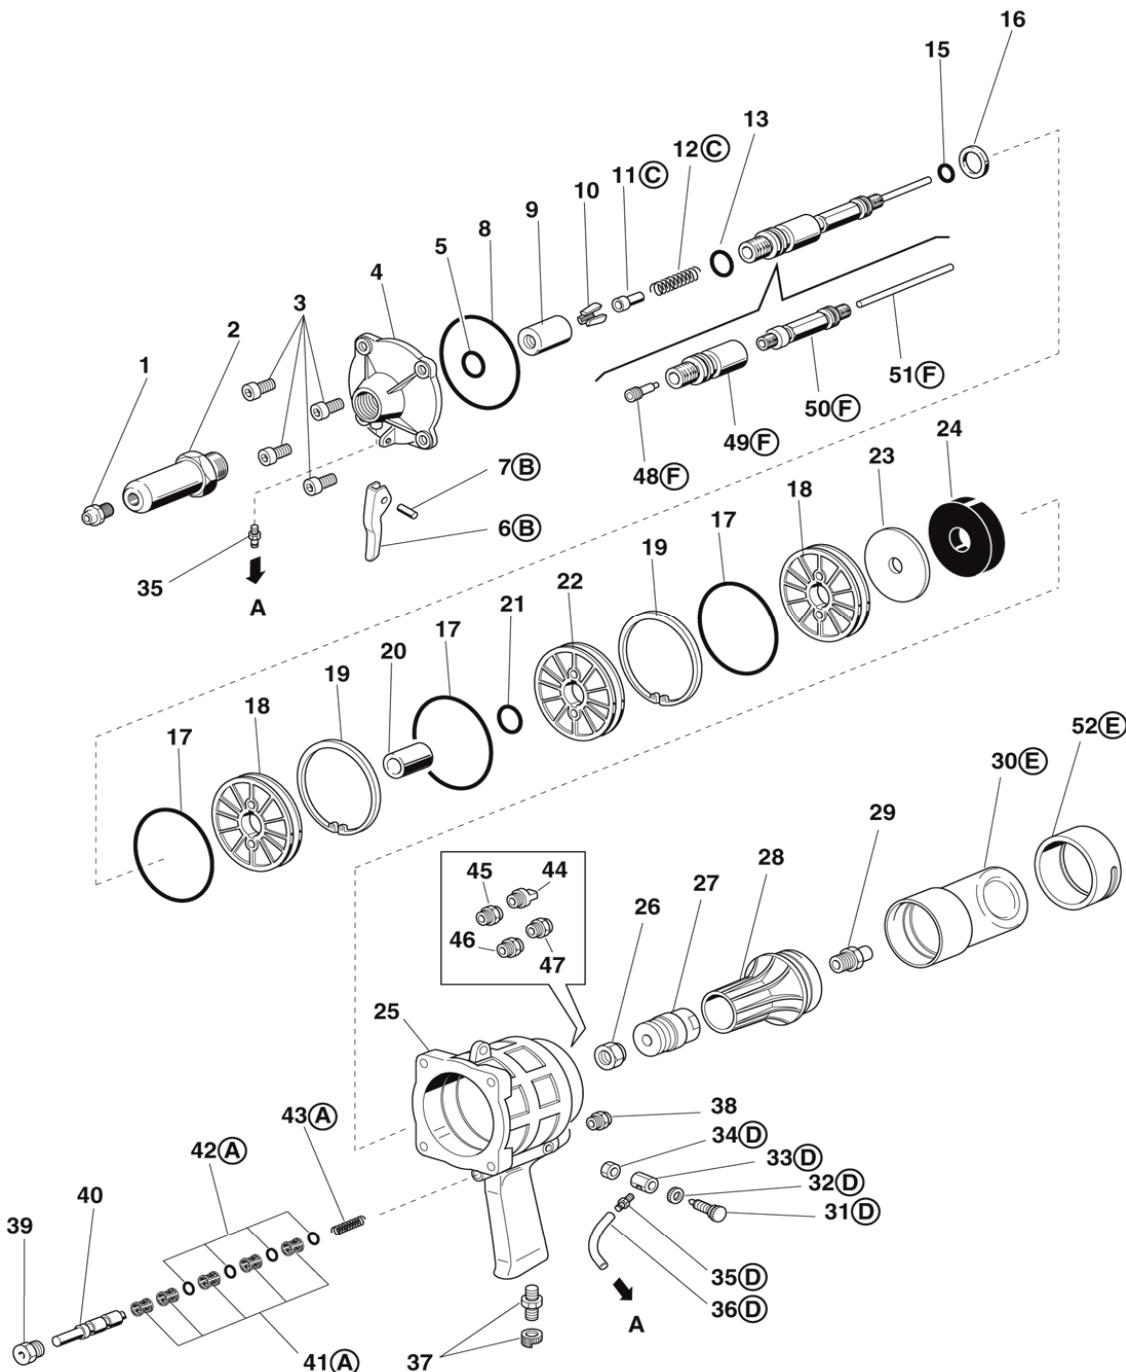

Follow the prescriptions of the national laws for disposing of the riveting tool.

After disconnecting the tool from the pneumatic system, disassemble and split all the components according to the material: steel, aluminium, plastic material, etc.

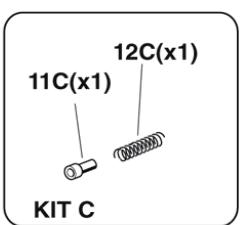

Then proceed to scrap the materials in accordance with current laws.
