

MUSTANG DHR AIR JACK KIT + SAFETY STANDS

Brand: **Krontec**

Product Code: **AIRJACKKIT-M1**

MUSTANG DHR AIR JACK KIT + SAFETY STANDS

This is the UPDATED complete Krontec Professional Air Jack Kit to suit the Ford Mustang Dark Horse R vehicle introduced in 2026, and is the specific parts required by the homologation rules document starting Version 4.2 9.18.2025 plus some extra fittings not detailed in the document that are needed.

Kit includes 4 x Krontec air jacks, 4 x safety stands, Professional Rohr coated aluminium tube (pipe), all required fittings, 9200-06 TEFLON flex line and car valve for the lance to connect to. The Stainless Steel outer Teflon hose has PTFE inner and is made to fit the car perfectly and terminate the car valve in the Fuel filler cap area. The customer needs to make mounting for the car valve in the filler area themselves.

Aluminium Rohr Tube is manually bent by the customer to fit the vehicle (comes in 2 x 4m coil lengths)

The only other item you may need, if you do not have one already, is a Lance to match the car valve, and any subsequent air/nitrogen supply products.

ALSO Car Lifters (Double-Up stands) and Vehicle Skates are also available to match the jacking system to ensure perfect fitment and avoid damage to the jack pistons (especially our Krontec Skates are a perfect match) see product SKATESSET-MUSTANG-GT4 All listed below in Related Products.

You can look at Lance (Spike) options LL-03 or LL-03BV and other items, see related products below. We would suggest the LL-03BV as it will allow you to more accurately and safely lower the vehicle in a more controlled manner.
