

OFFSHORE DIVER LAUNCH & RECOVERY UNIT

Product Code: **DLR-750**

OFFSHORE DIVER LAUNCH & RECOVERY UNIT

This very compact Diver Launch and Recovery System is a complete package ready to "Plug & Play" for a wide variety of applications. It is also stackable and designed to fit 2 complete systems in a high cube 20ft container, perfect for when you need to store them for extended periods of time, if required. See images for examples of special container option with Steel, lockable, lid for maximum protection and security.

The unit comes, as standard, with dual HPU and electrical control systems to ensure complete redundancy!

The footprint of this LARS is only 2000mm x 2160mm to use the least amount of deck space onboard a vessel.

Further it has the same high quality and proven durability as already known in the LARS Lite. Extensive use of high-quality Stainless Steel, hydraulic controls for winches and frame, etc.. This realizes a long lifespan even with the harsh environments of the sea.

This complete and compact set has all the features needed to Launch and Recover the Divers to and from the subsea work area. Important also to know is that every LARS in our product range come complete with Lloyds Design and Appraisal Documents.

Furthermore, we are able to support our clients with BESPOKE versions and a multitude of options of this well proven system. Also further bespoke versions to best fit your exacting requirements.
