

HARRIS 40BAR HIGH FLOW RACE REG & ADAPT

Brand: Harris

Product Code: HARRIS H2540BRACE-A

HARRIS 40BAR HIGH FLOW RACE REG & ADAPT

This particular regulator is the Harris "High Flow" solution and comes with a Type 50 Nitrogen Spigot & Nut ready to plug into a Nitrogen bottle in Australia & New Zealand and ALSO fitted with a adaptor for the outlet to make it a 3/8" BSP Female Thread, with swivel nut.

This particular regulator is NOT the standard H25 one, it is different, and is approved by Supercars for use in Pit lane. We also have a safety blow off valve assembly available to fit to this regulator, as we strongly recommend to ALWAYS have a safety blow off valve incorporated with your regulators. The safety Blow Off valve assembly is Part# HRSRV35B, and can be fitted to the outlet to maximise protection in case of regulator failure, and ensures you meet the required Australian and New Zealand Standards.

This setup will allow you to fit our RDP20500021R RACE Coupler or another 3/8" Male thread coupler or fitting to the outlet giving you flexibility. The swivel nut allows you the ability to fix the fitting you attach in the correct direction/orientation

This unit is popular with our motorsport clients who require an alternative to our premium Paoli Pit Stop regulators. We can also supply output couplers (fittings) to fit this regulator to deliver to you a complete ready to "Plug & Play" solution!

If looking for the bare regulator, ask for (Part no. HARRIS H2540BRACE), or Part no. HARRIS H2540BRACE-AF with the output coupler (fitting) already fitted to this regulator, so it's ready to "Plug & Play"

Remember we strongly recommend you also buy and fit the safety blowoff valve assembly part# HRSRV35B !

This Regulator does NOT come with the gauge protectors as shown, you need to order them separately Order Code: HRRPC63
