TOKU 

1/2" IND PISTOL IMPACT WRENCH

1/2" Square drive Industrial pistol grip impact wrench, made in Japan. This tool features a unique Cold Forged Twin Hammer mechanism making it far superior to any other on the market in its class.

This tool is very lightweight and perfectly balanced, which helps to reduce any RSI complaints - a great OH&S feature! Other benefits are the quiet handle exhaust, 4 step speed control and Pro Grip.

This tool is also perfectly suited to tyre shops for use with alloy rims where it is important not to over tighten the wheel nuts. It has been designed to reach the appropriate torque for such applications, without risking over tightening. *all nuts should be checked with a tested torque wrench*

Whether you are a tyre shop, manufacturer, construction or mine site or defence department, this tool will be sure to please - we are confident of this!
