Comes with the 22 Socket contacts to be fitted to the connector, and also a basic insert/extraction tool.

This is made from the highest quality materials to strict quality control procedures, ensuring you get the best product on the market PLUS it has a special coating to provide better connection/disconnection! There are many different sizes to suit your exacting applications, and if you cannot find the size you require , simply ask, as we can manufacture to order.

Please look at associated products as there may be other items that you may require to complete your professional steering quick release set up. Most importantly, if you cannot find what you are looking for please email us.

A true ZERO "slop" steering quick release. Few parts in the motorsport industry are really revolutionary - but this one is definitely the market leader!

This coupling is unique in many ways. Splined products do not offer zero "slop" movement, and suffer from wear issues and they age, becoming sloppy. Most brands also don't index the wheel so it is straight when you click it on, and as well, they do not give you a positive lock indication so you know the wheel is in fact securely locked on the car. With this product you can forget all of these issues, it just works, and very well

at that!

The Krontec steering coupling system is completely different. This part number is a weld on boss to weld to your steering column. You can see other options in our site - such as other size weld on bosses and bolt on Bosses. We can even supply the couplings with Professional German electrical connectors fitted, allowing your data to be neatly passed through the coupling point and avoid ugly and cumbersome cables.

The Male portion of the boss is both tear-shaped and tapered depth-wise. This coupling centers the steering wheel perfectly and glides on with absolute ease, whilst providing complete confidence your steering wheel is 100% locked and cannot come off unintentionally.

One of the most critical components to your vehicle is the steering components, can you afford to be without our solution - we believe not!
