

RET-RING 3/4"DR (1-1/4"ID)
Product Code: RR10005CG

RET-RING 3/4"DR (1-1/4"ID)

3/4" DR X 1-1/4" (31.75mm) ID socket retaining ring with Crush Gauge provides a safe and secure way to retain sockets to your tool, it will tell you when to replace worn sockets!

Specifications	
Drive	3/4"
Inside Diameter (id)	31.75 mm (1-1/4")

This part number is suited to 3/4" drive tools and has a 31.75mm (1-1/4") inside diameter to fit the socket groove.

This product is invaluable from an operational point, and most importantly a safety point. This product is far safer than the original way sockets are "retained" on the tool. The old way was via a metal pin and o ring, which can have a tendency to cause operator injury when the o ring loses it's tensile strength and can permit the metal pin to come out under rotational force. This can then be a dangerous safety hazard - this polyurethane product eliminates this danger.

Many sizes available for a multitude of applications.
