

RET-RING 1/2"DR (1.150"ID)

Product Code: **RR50115**

RET-RING 1/2"DR (1.150"ID)

1/2" DR X 1-1/8" (29 mm) ID socket retaining ring provides a safe and secure way to retain sockets to your tool, it will tell you when to replace worn sockets!

This part number is suited to 1/2" drive tools and has a 29 mm (1-1/8") inside diameter to fit the socket groove.

This product is invaluable from an operational point, and most importantly a safety point. This product is far safer than the original way sockets are "retained" on the tool. The old way was via a metal pin and o ring, which can have a tendency to cause operator injury when the o ring loses it's tensile strength and can permit the metal pin to come out under rotational force. This can then be a dangerous safety hazard - this polyurethane product eliminates this danger.

Many sizes available for a multitude of applications.
