

1-1/4" HEX IND BREAKER

Brand: **Toku**

Product Code: **TPB90 - 1 1/4"**

1-1/4" HEX IND BREAKER

Industrial 42kg (92.4lb) Breaker - Made in Japan. This product is manufactured from the highest quality materials to ensure you get the best durability and performance, maximising your return on investment.

The alloy steel forged components provide maximum durability, forged latch retainer system makes for quick and easy chisel change. 4 bolt handle design allows for quick and easy servicing, this is especially handy when on site or remote locations.

The tool also features a swivel inlet to make operation and handling of the tool easier and replaceable front head bushings further extend the service life of the tool. Also an important feature for tool durability and reduced vibrations is the front head retaining system. Some manufacturers promote designs without this style as "Less Parts" and their marketing promotes it as cheaper and easier to service, however we believe, from our experience, basic design principle, and customer feedback that our design is far superior.

Our design feature of having the front head spring bumpers assists in absorbing the impact energy/shock to reduce the damage of front head and front head bushing for longer life of those components and minimizes the service/maintenance cost. The designs promoted with less part in fact costs more in the long term as the components are subject to more wear, and more vibrations are passed to the operator. We also feature a tappet design which further enhances this tools durability by extending the piston durability and reduce the damage of "blank-blow" operation.

If you are a construction or hire company, mine site or similar company looking for a solid performer with after sales technical and spare parts support from stock - this is the product for you.
